

Puros[®] Cancellous Particulate Allograft & Puros Block Allograft

Puros Cancellous Particulate Allograft

The Natural Choice For Healthy¹ Bone Growth.

1. Proven, Predictable Regeneration

- Acts as an osteoconductive scaffold for new bone formation.²⁻³
- In large-volume applications, prospective studies have documented faster bone regeneration at 6 months than grafts containing sintered bovine bone matrix.⁴⁻⁵
- In small-volume applications, regeneration of hard bone has been reported as early as 3–5 months.⁶⁻⁸

2. Natural And Easy To Use

- Retains osteoconductive properties due to the preservation of the natural bone matrix collagen and mineral composition, trabecular pattern, and original porosity,²⁻³ enabling the ingrowth of vascular and cellular connective tissue.⁷
- Easy handling – quick hydration, five-year shelf life and room temperature storage.

3. Tutoplast[®] Process

- Sterilized and preserved using the proprietary Tutoplast process, Puros Cancellous Particulate is a high-quality allograft designed for large and small volume bone regeneration procedures.

Puros Allografts – Filling nature's void.
A comprehensive line of allografts for bone and soft tissue augmentation needs.

The Bone Grafting Material Of Choice For Many Clinicians Due To Its History Of Well-Documented Clinical Results.

Puros Cancellous Particulate Allografts have shown successful clinical results in:

- Regeneration of periodontal bone and furcation defects.²⁻³
- Osseous defect regeneration.^{2-3, 5-8}
- Regeneration of extraction sockets.⁶⁻⁷
- Regeneration of gaps around block grafts.⁶⁻⁹
- Horizontal alveolar crest augmentation.⁶⁻⁹
- Sinus augmentation.⁴⁻⁵

Puros Block Allograft

Changing the concept of block grafting.

1. Documented Successful Bone Regeneration

- Documented graft and implant success rates make it a viable alternative to autogenous block grafting.¹⁰⁻¹¹
- Cortico-Cancellous structure retains the remodeling capabilities of cancellous bone with the strength advantages of cortical bone needed for dimensional ridge augmentation.¹²

2. Time-Saving

- Saves time, helps to reduce pain, and can shorten the patient's rehabilitation period by eliminating the need to harvest an autogenous graft.¹⁰

3. Tutoplast Process

- Sterilized and preserved using the proprietary Tutoplast process, Puros Block Allograft offers a high-quality option for successful bone regeneration.¹⁰
- Retains osteoconductive properties due to the preservation of the natural bone matrix collagen and mineral composition, trabecular pattern, original porosity.¹³

Puros Allografts – Filling nature's void.

A comprehensive line of allografts for bone and soft tissue augmentation needs.

A Clinically Proven Documented Solution For Restoring Volume To Severely Resorbed Ridges.¹⁰⁻¹¹

Clinical advantages of Puros Block Allografts:

- Outcomes¹⁰⁻¹¹ have been comparable to those generally reported for autogenous block grafting, but without the need for a second surgery to harvest native bone.¹⁴⁻¹⁵
- Clinical reports have documented the ability to stabilize implants 5–6 months after grafting.¹⁰⁻¹²
- Quick hydration, five-year shelf life and room temperature storage.

The Unique Tutoplast Process

The proprietary Tutoplast process assures the highest standard of tissue safety and quality with minimal risk of disease transmission.¹³

The process preserves the valuable collagen matrix and tissue integrity while inactivating pathogens and gently removing unwanted materials, such as cells, antigens and viruses.¹³ The result is safe, biocompatible tissue.

For over 40 years, Tutoplast processed tissues have been safely used in more than three million procedures.¹³
